

## Core Competencies

Dijatek assists **information-driven organizations** by automating and integrating their outdated, complex, and disconnected business processes. We specialize in building custom applications and dashboards that enable our clients to reduce their process complexity, increase their business efficiency, and improve their profitability.

- Customized applications and dashboards
- Software Integration
- Business Process Automation

## Differentiators

- **Team dynamic** rooted in Military Leadership traditions to include best practices from Air War College Leadership Studies
- Connected directly to the UCF Coding Bootcamp for a continuous influx of new talent for growth and scalability
- All projects handled by a core group of expert coders with **50+ years of coding experience**
- Created the **Dijatek /install Internship Program** to solve Central Florida's technology pipeline problem, with a 100% placement rate

## Past Performance

### Aeronyde Corp.

- **Problem:** Manual authorization of drone flight plan requests could take up to 90 days with a paper application
- **Action:** Developed an online drone operator flight planning system that allows operators to easily plan commercial drone flights in FAA LAANC (Low Altitude Authorization and Notification Capability) airspace
- **Result:** Reduced authorization time to near real time, automated authorization when flight plan is within restrictions
- [https://www.faa.gov/uas/programs\\_partnerships/uas\\_data\\_exchange/](https://www.faa.gov/uas/programs_partnerships/uas_data_exchange/)

### Alegiant Health Services

- **Problem:** Processed only 6 - 20 email job applications per day
- **Action:** Created a custom web application that integrated email job applications with their database records
- Integrated their database with the Bullhorn API
- **Result:** Used automation to increase application processing to 500/day and optimized job postings so they would appear on Google's Job Search (a joint initiative with Monster to provide job listings directly in Google's search results)

### Geneomy

- **Problem:** Inherited a legacy codebase that was non-functional and not secure
- **Action:** Rebuilt the program to incorporate long-term family memory storage
- Added cutting-edge cybersecurity features for protection of Personally Identifiable Information
- **Result:** Innovated a new, secure, event-based family social network where families can safely store their memories for generations
